Containers' temperature should not be increased above 50 °C.  
The working pressure in the receptacle must not exceed the saturation vapour pressure of the pure product resulting at a temperature of 50 °C.  
Prevent cylinders from falling over.  
Take precautionary measures against static discharges. Ground barrels and installations. Use only antistatically equipped (spark-free) tools.  
Use explosion-proof machinery, apparatus, ventilation facilities, tools etc.  
Ensure valve protection device is correctly fitted.  
Ensure valve outlet cap nut or plug (where provided) is correctly fitted.  
Open valve slowly to avoid pressure shock.  
Do not allow backflow into the container.  
Entering of water into the container must be prevented.  
No water to valves, flanges and other fittings.  
Purging of pipes and valves with inert gases - to avoid: water, solvents.
